Converting to Wav files in Audacity

Go to *File* and then to *Export as Wav*.

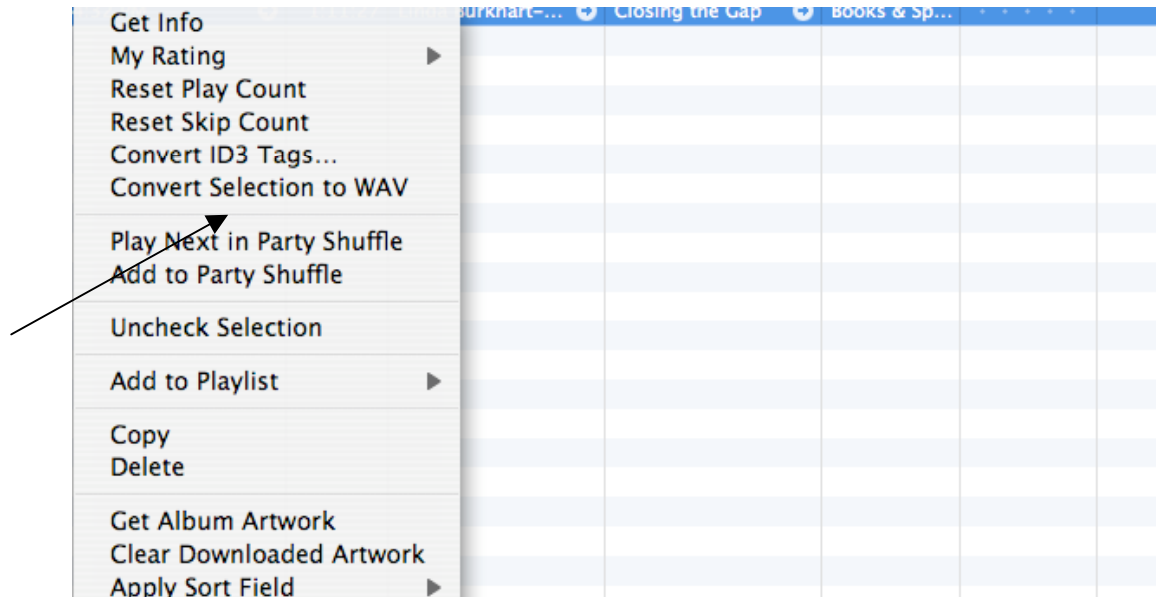

Converting to Wav Files in iTunes

Step One: Go to *iTunes*, go into *Preferences*, then *Advanced*, then *Importing*. Choose to import as a Wav.

Step Two: Then go find your audio files, have them highlighted and right click. Select *Convert Selection to Wav*. You will wait while your files are converted. You will then have another copy of the file. To check which one is which, simply right click and select *Get info*.

Use <http://media-convert.com>

Select the *Output format* to be .wav.

This is great for converting one or two files, or from a location that does not have *iTunes* or *Audacity*.
